HORIZONTAL DIRECTIONAL DRILLING
Bonded and Insured
HORIZONTAL DIRECTIONAL DRILLING

- State of the art trenchless installation
- Minimal disturbance to natural habitats or ecosystems
- Capable of crossing spans of more than 7,000 feet with pipe up to 48 inches in diameter
- Nationwide drilling contractor
- Drill through rock, dirt, clay, cobble

S.J. Louis has the unique capability to successfully perform and install underground construction utilities using a variety of methods. Horizontal directional drilling is one of the processes that can be performed by S.J. Louis for all sectors of construction, from gas, oil, water, sewer, power and communications. Their capabilities include the installation of product size up to 48”, lengths of over 7,000 feet and have intersect capabilities. In addition, their HDD spreads range from 40,000 lbs. to over 500,000 lbs. of pullback force.

S.J. Louis’ typical project installations occur under waterbodies and wetlands, and urban settings under roadways and buildings. In addition, S.J. Louis can also successfully drill under rivers, waterways, railroads, airport runways, lakes, ponds and congested urban areas. They utilize DCI and vector magnetics locating equipment to ensure proper placement of all utility installations.
